

WeekendTesting

found my location for me - easily find the town I want, and the weather comes up
found it by zip code **the app can't find my location of "Parker, CO"**
w00t! **my update!!!**
Important to me that I do NOT have to sign in
What's important? Q asked by JeanAnn
too many flashy adverts
I hate that it asks for me to sign up when I went back to it, it apparently had gone to 'sleep'
apparently tapping the hamburger brings up signup?
you can't add a suggestion or even upvote one without putting in your email address - annoying
suggestions & support link is interesting
tapping hamburger, there's a whole menu I didn't see at first
so how does one set preferences?
it didnt ask me if i want to see C or F
My phone is in French, so I'm also testing localisation

where is the forecast? I only see current temp, hi, low, conditions
this magically appeared later - forecast and stuff

Navigation
You can use + or tap bottom of screen to see your locations and add one
tapping check mark took me to "Social Weather". First of all, that's not translated. Second - why would I want this?
settings from settings -> "view my mPOINTS reward" option loads pop up saying "temporarily unavailable"
New node

Do objects appear as expected?
Suddenly when I tapped where I thought I have been tapping all along on the home screen, I got a screen with more info, weather news, and what looks like an ad
now got a modal telling me about a new weather widget. Huh?
Radar - I can't tell what it is showing me - are purple areas rain? Oh, no, those are airports. from radar, I got to some settings, with things listed like storms, clouds, temp, UV index I got it to show clouds!
finally found settings
I like that it gives humidity - now that I found it!
played the video but couldn't figure out how to pause or stop. Random tapping stopped it and returned me to the main screen.
I like the sunrise/sunset graphic
Pollen index is nice, tho I don't trust it, I think there is more pollen than that!
why is the video listed twice - once near the top and once further down?

can you perform tasks in a reasonable or expected timely manner/
to me it is not intuitive - I'm having trouble finding things

Installation
was as expected in terms of getting it up and running, but not setting preferences etc

bug?
under manage locations added two cities, under setting go to "my alert" -> "severe weather" under "your location" it is not showing saved two locations but one
under manage locations added two cities, under setting go to "my alert" -> for any other alerts, it pops a message asking to signup/login" not precise Lisa finally saw this too!
Set preferences to "Hybrid" - now my temp is in centigrade on the home screen, but still F other places
eventually, it corrected all temps to C, so that looks like a bug
this is reproducible. For example- C at the top, F at Current conditions, C at hourly forecast and 10 day
going to phone home page and back into app fixes it
I made a charter for exploring this: explore the different settings for temperature and other metrics to discover whether they display consistently everywhere in the app
New node

Lisa's device: iphone 6 iOS 8.4, language set to French
locations Parker, CO
Paris, France

Raja Device: Sony Xperia T3 / Android
